Stormwater Runoff

Rain + Pollution = Runoff

Urban stormwater runoff has been identified as the primary source of pollution to surface waters in Florida. Stormwater comes off building roofs, driveways, and roads when it rains. Since roads are impervious surfaces, meaning the rain can not pass through them, the rain is washed into the swales, ditches, and street gutters which all leads to the Indian River Lagoon. **Stormwater is NOT directed to a treatment facility!** Anything such as litter, soil, garden waste, fertilizer, car washing chemicals, vehicle oil, grease and fluids from roadways results in pollution of our waterways. These pollutants can harm the plant and wildlife as well as making the waterways in our parks and recreation areas unsightly.

Everyone has a part to play in reducing the pollution.

Ways in which you may help reduce the amount of stormwater pollution you contribute:

- * Maintain vehicle to prevent leaks.
- * Wash vehicle at commercial car wash or wash in your yard so that washing soap/water gets infiltrated into the ground.
- * Minimize the use of fertilizer and pesticides and **NEVER** apply before a heavy rain.
- * Pet owners should pick up after their pets and dispose of pet waste properly.
- * Keep lawn and household chemicals tightly sealed and in a place where rain cannot reach them and dispose of old or unwanted chemicals at the County Landfill (Household Hazardous Waste).
- * **NEVER** put anything in a storm drain.

Really want to help? Participate in the next river/beach cleanup, storm drain marking event, and report stormwater violations.

If you have any further questions please contact the
Department of Environmental Services at (386) 424-2400 ext 4007.

Be part of the SOLUTION not the POLLUTION!

REFUSE
